                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCTGTGTGGA----CGGGGGGCCCTCCACAGATGGCTTGGACTGGTTCTGCTACCATGCCT 843
                                                                                                                                                                                                                                                                            WIPO
                                                                                                                           capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1375 Gracaaggacriggaaggacrircriggrigggacgrirarccggaggccgcaccrirccric

capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA (ABBS7737-ABB72072)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GTACAAGGACTGGAAGGACTTTCTGGTGGGACGTTTATCCGGAGCCCGCACCCTTCCCTC

Okubo K;

Matsubara K,

Identifying gene signatures in 3'-directed human cDNA library - for diagnosis of abnormal cell function, by preparing cDNA that reflects relative abundance of corresp. mRNA in specific human tissues

Claim 1; Page 1414; 2245pp; Japanese

A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-126837 and which is able to hybridise to part of human genomic DNA, cDNA or man, a Claimed. The GS (Gene Signature) sequences were obtained from 3' directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the

3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 carcererererana arcerece de recreere en concerce a concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de concerce de c

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan, DNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA illi insert sequencing:
Research Association for Biotechnology (RAB); cDNA ilbrary
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: RAB and
                                        AK056443 3188 bp mRNA linear PRI 01-AUG-2002 Homo sapiens cDNA FLJ31881 fis, clone NT2RP7002829, weakly similar to Scm-related gene containing four mbt domains.

Clone from S. Wienmann, Molecular Genome Analysis, German Cancer
Research Center: DKFZ); Email s.wiemann@dkfz-heidelberg de;

sequenced by MediGenomix (Martinszied/Germany) within the CDNA
sequencing consortium of the German Genome Project. This clone
(DKFZp/FIL141) is available at the RZPD in Berlin. Please contact
the RZPD: Resourcenzentrum, Heubnerweg 6, 14659
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available
at http://mips.gsf.de/proj/cDNA/.

Submitted (11-JAN-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requesters: clonerequestedsanger.ac.uk

On May 27, 1999 this sequence version replaced gi:4775627.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Ent. EMBL; Sw.; SWISSERCT; Tr.; TREMBL; Wp:, WORDEP: Information on the WORMPEP database can be found at the proper and according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as annotated repeats, but not necessarily within known annotated repeats, but not necessarily within known annotated repeats, but not necessarily within known annotated repeats sequence elements. Where the sequence is an annotation using the 'unsure' feature key. This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22, here in the manner in moration can be found at
